

LAROX REPLACEMENT FILTER PLATES

A custom manufactured polypropylene filter plate is now available to replace the original stainless steel filter plates used in vertical tower presses such as the Larox or Hoesch tower press. Membranes used in the polypropylene plate are much more cost effective and the polypropylene body is highly resistant to corrosion and chemical attack.

The polypropylene plates have a highly efficient drainage surface improving cloth life and performance.

A strengthening frame of stainless steel attaches around a polypropylene body plate and incorporates

all the necessary connections to the filter. For more information or to obtain a quotation please contact your local Micronics office.
