

SOLAFT® PrimaDisc™ optimizes the filtration process through the highly-efficient solids capture capacity from your liquid streams. The SOLAFT® PrimaDisc™ product line is part of our proprietary range of products used in Rotary Disc Vacuum Filter applications.

SOLAFT® PrimaDisc™ products are designed with highly-advanced materials that use specialized surface properties to minimize residual cake moisture while allowing for effortless and efficient cake discharge.

Built to withstand the harshest and most abrasive operating conditions, our SOLAFT® PrimaDisc™ line not only improves the filtrate clarity but delivers longer filter life and greater filter availability.

ADVANTAGES & BENEFITS

- High sustainable flows and long life with correct cloth care management.
- Great resistance to abrasion and random cloth failures, such as rips and tears.
- Easy to install and remove.
- Individually tailored to your equipment and fabricated from laser cut media for precision fitting.
- Higher productivity through higher equipment availability.

APPLICABLE INDUSTRIES

FEATURES & OPTIONS

FABRIC OPTIONS

Woven and needled media available. Fabric options incl. polypropylene, nylon, polyester, & others

OPERATING TEMP

Wide range of operating temperature options available according to your industry requirements

LONG LIFE

Reduced down time and cost savings from long filter life

FILTRATE LEVELS

Superior target filtrate levels according to customer and industry requirements

MOISTURE LEVELS

Optimal cake moisture levels according to customer and industry requirements
